

Amendments to the Claims

1. (Currently amended) A polyaniline-containing composition, comprising a polyaniline and an emulsion polymer, wherein
 - the content of the polyaniline in the polyaniline-containing composition is in the range of 0.02 to 10% by mass; and
 - the emulsion polymer includes a vinylpyrrolidone and an acid group-containing monomer as constituent monomers and as essential components; and
 - the polyaniline-containing composition is prepared by dissolving or dispersing a polyaniline in a monomer mixture including a vinylpyrrolidone and an acid group-containing monomer as an essential monomer component, and emulsion-polymerizing the resulting mixture.
2. (Original) The polyaniline-containing composition according to claim 1, wherein the content of the vinylpyrrolidone is in the range of 10 to 70 % by mass in the total constituent monomers for the emulsion polymer.
3. (Previously presented) The polyaniline-containing composition according to claim 1, wherein the content of the acid group-containing monomer is in the range of 0.1 to 40 % by mass in the total constituent monomers for the emulsion polymer.
4. (Previously presented) The polyaniline-containing composition according to claim 1, wherein the polyaniline is an emeraldine-type polyaniline.
5. (Previously presented) The polyaniline-containing composition according to claim 2, wherein the content of the acid group-containing monomer is in the range of 0.1 to 40 % by mass in the total constituent monomers for the emulsion polymer.
6. (Previously presented) The polyaniline-containing composition according to claim 2, wherein the polyaniline is an emeraldine-type polyaniline.

7. (Previously presented) The polyaniline-containing composition according to claim 3, wherein the polyaniline is an emeraldine-type polyaniline.

8. (Previously presented) The polyaniline-containing composition according to claim 5, wherein the polyaniline is an emeraldine-type polyaniline.
